

## **Software Engineer – Jacked Inc – Santa Monica**

### **About the Company**

Jacked is a venture backed internet start-up based in Santa Monica, California, building a digital media platform to enable consumers to hotwire their TVs and create the viewing experience they want.

Jacked is building a team of talented, inspired and committed innovators to revolutionize television as we know it. We are seeking an experienced Senior Software Engineer to help build a market leading company and cutting edge products.

### **Job Description**

- Prototype, develop, and deploy new features and functionality for company's platform and internet products
- Work closely with Product Management in defining product requirements translating them into technical specifications
- Support and enhance current products with new features
- Responsible for performance and scalability optimizations of various components of the company's platform
- Provide project estimations and LOE for roadmap features
- Manage time effectively with minimal supervision to ensure that projects release on-time
- Develop comprehensive unit test harnesses for all code developed
- Apply best practices and proactively fill the gaps throughout the iterative development cycle
- Perform production support and troubleshooting
- Interface with 3<sup>rd</sup> party vendors and technology partners regarding integration issues

### **Requirements**

- BS or MS in Computer Science or related engineering field
- 5+ years in Software Development, with at least 3 years in internet based products
- Ability to meet aggressive implementation deadlines
- Proficiency with J2EE and one or more Java Application Framework (Struts, Spring, Tiles, etc.)
- Thorough understanding of agile development methodologies and processes
- Experience in designing and building real-time statistical engines
- Experience in working on projects related to content aggregation and content federation
- Experience with database related development (SQL, JDBC, Hibernate)
- Inversion of Control/Dependency Injection experience (spring/hivemind/pico container)
- Knowledge of JBoss and JMS is a plus
- Expert understanding of Web Standards (HTML, DHTML, AJAX, XML, XSL, JavaScript, Web Services, RSS).
- Strong teamwork and communication skills
- Passionate about college and professional sports

Compensation package includes competitive base salary, bonus plan, stock option package and benefits.
